

* FRENCH TOY MANUFACTURER

SMOBY IN A FEW WORDS

As a multi-specialist company, we design and manufacture toys for children from 0 to 8 years old and accompany them through every stage of their development.

All Smoby toys are imagined and designed at our head office located in the Jura region. Today, **75% of our products are manufactured in France.** When you buy a Smoby product, you help creating almost **600 jobs** in France.

LETS' TALK ABOUT ECO-RESPONSIBILITY

Certified ISO 50001, a standard made to help companies reduce their energy consumption, Smoby has already cut its energy consumption by 24% since 2015, the equivalent of 463 homes.

Smoby is also now compliant with the new regulation requiring all users of plastic microbeads (GPI) to put in place procedures to prevent any pollution of the environment.

AND WHAT ABOUT THE PRODUCT?

Eco-design at Smoby means limiting the impact of our products on the planet, throughout their entire life cycle.

It starts with the choice of raw materials and **local** manufacturing, followed by the management and optimisation of storage and transport.

Our products are designed to be **robust and** durable, going beyond the toy standard, and can be completely dismantled to be recycled more easily.

Smoby is also committed to reducing waste, for example by eliminating single-use plastics from its packaging.

WHAT ARE THE ADVANTAGES OF PLASTIC IN TOYS?

The sector is highly regulated. As toys are held in the hand and chewed on by toddlers, we pay a particular attention to the choice of our materials.

Plastic gives us a lot of freedom in terms of shapes and colours for deeper play functions.

It's also easy to clean, practical and lightweight!

In order to do this, we are going to use **post-consumer waste** from your dustbins (washing powder cans, ice-cream tubs, butter trays, etc.) or postindustrial waste: leftovers or waste from other productions.

HOW DOES IT WORK?

Once all the waste has been collected, it has to be sorted out before being cleaned then reprocess it into granules...

The material then has to comply with the toy standard and our requirements in terms of robustness but also quality.

It is sometimes necessary to test parts on a case-to-case basis and, depending on the results, to mix virgin and recycled materials. Our ultimate goal is to offer 100% recycled toys
